

## Cloud Computing

### Assignment- Week 10

#### TYPE OF QUESTION: MCQ/MSQ

Number of questions: 10

Total mark: 10 X 1 = 10

---

#### **QUESTION 1:**

Post-copy and Pre-copy migration approaches are employed in :

- a. Live Migration process
- b. Non-live Migration process
- c. Hybrid Migration process
- d. None of these

Correct Answer: a

Detailed Solution: Both Post-copy and Pre-copy are approaches for the live migration process.

#### **QUESTION 2:**

Kubernetes operates at the hardware level.

- a. True
- b. False

Correct Answer: b

Detailed Solution: Kubernetes operates at the container level. (Slide 96)

#### **QUESTION 3:**

What is(are) the key advantage(s) of Docker?

- a. Facilitating microservices
- b. Modeling networks.
- c. Packaging software
- d. None of these

Correct Answer: a,b,c

Detailed Solution: Facilitating microservices, packaging software, and modeling networks for initiating multiple isolated containers on a single machine, are the key advantages of Docker. (slide - 73)

---

**QUESTION 4:**

Which of the following statements is most appropriate about Docker ?

- a. Docker is a platform that allows to build and run but not ship apps.
- b. Docker is a platform that allows to build and ship but but not to run apps.
- c. Docker is a platform that allows to build, ship and, run apps.
- d. Docker is a platform that only allows to ship and run but not to build apps.

Correct Answer: c

Detailed Solution: Docker is a platform that allows to build, ship and, run any app anywhere. (page - 65)

**QUESTION 5:**

In Docker utility, \_\_\_\_\_ is a collection of filesystem layers and some metadata that, if taken together, can be spun up as Docker containers.

- a. Operating System
- b. Microservice
- c. Virtual Machine
- d. Image

Correct Answer: d

Detailed Solution: In Docker utility, an image is a collection of filesystem layers and some metadata which if taken together, can be spun up as Docker containers. (slide - 77)

**QUESTION 6:**

Containers are similar to VMs but they have unrelaxed isolation properties to share the operating system among the applications.

- a. True
- b. False

Correct Answer: b

Detailed Solution: Containers are similar to VMs but they have relaxed isolation properties to share operating systems among the applications. Therefore, containers are considered lightweight.

**QUESTION 7:**

Choose the most appropriate option.

Statement 1: Container is a lightweight virtualization technique.

Statement 2: Container contains the code and all its dependencies.

- a. Only statement 1 is true
- b. Only statement 2 is true
- c. Both statement 1 and 2 are true
- d. Bothe the statements are false

Correct Answer: c

Detailed Solution: Container is a lightweight virtualization technique. Container contains the code and all its dependencies so the applications run quickly. (slide - 46)

**QUESTION 8:**

Private Docker registry is a service that stores Docker images.

- a. True
- b. False

Correct Answer: a

Detailed Solution: Private Docker registry is a service that stores Docker images.

Moreover, Docker on the host machine is split into two parts- a daemon with RESTful API and a client who talks with the daemon.

**QUESTION 9:**

Docker builds offer enhanced reproducibility and replicability compared to conventional software development approaches.

- a. True
- b. False

Correct Answer: a

Detailed Solution: Docker builds are more reproducible and replicable than traditional software building methods. This makes implementing CD much easier. (Slide - 76)

**QUESTION 10:**

Given the VM memory size of 1024 GB and the transmission rate of 16 MB/sec

What are the total migration time and downtime for non-live VM migration? Choose the most appropriate option.

- a. 20 hours, 25 hours
- b. 18 hours, 18 hours
- c. 16 hours, 16 hours
- d. 24 hours, 20 hours

Correct Answer: b

Detailed Solution: Total Migration time = VM memory size/ transmission rate  
 $= (1024 \times 2^{30}) / (16 \times 2^{20}) = 65536 \text{ secs} = 18 \text{ hours.}$

For non-live migration, overall migration time is the same as overall downtime.
